MAIN STAGE | **09:30** | **Navigating uncertainty - AI in a Zero trust world**
In today's digital world, traditional data protection methods are insufficient. The shift from static defenses to dynamic approaches like Zero Trust—where everything is verified—reflects the growing complexity of securing valuable and ubiquitous data. Artificial intelligence (AI) offers both opportunities and risks for cybersecurity. To address these challenges, organizations must understand the evolution of security practices, the data dilemma, and AI's role, while implementing robust measures, continuous monitoring, and regulatory compliance.

MAIN STAGE   **15:30**   **Coffee break**
Enjoy coffee and cake and make new contacts with the visitors and exhibitors of the Cybersecurity Summit.

MAIN STAGE   **16:00**   **Synergies between humans and AI: a critical look into the future of cybersecurity**
In this keynote, we highlight the growing collaboration between human expertise and artificial intelligence in the field of cybersecurity. We discuss both the opportunities and challenges arising from this synergy and analyze how this collaboration can impact the future of digital security. We also take a critical look at ethical issues and the need to continuously develop both technical and human capabilities to withstand ever-changing threats.

ZUGSPITZE MASTERCLASSES | **14:15** | **The Future of Hacking: Attacks on current and future technologies**
IT is everywhere these days. The number of connections between IT components is exploding and the attack surface is increasing massively as a result. Isn't this exactly the scenario that hackers have always dreamed of?
Sebastian Schreiber, founder and CEO of the IT security company SySS GmbH, demonstrates in a live hacking session how IT networks can be taken over, passwords cracked, anti-virus programs bypassed and data extracted. He will demonstrate how easily and quickly current wireless alarm systems, locking systems and wireless presenters, as well as fingerprint-protected USB sticks, can be hacked. He also shows how paywalls can be outwitted and how household and other IoT devices can be manipulated by hacking thermostats.
